Mauricio Solano

UX Designer & AI Builder

https://maosolano.com

I'm a generalist UX designer working at the intersection of UX, narrative and technology.

My career spans visual design, web design, transcreation and digital product design, including UX writing for banking and ecommerce.

At Mercado Libre and Scotiabank I learned to turn complex processes into **clearer experiences**, to collaborate with multidisciplinary teams and to set design principles that help products stay consistent.

Today I'm extending that experience with **generative AI**. I use tools like Claude and Claude Code to explore solutions, **build functional prototypes** and document the rules and systems that connect design decisions with implementation.

I'm interested in closing the gap between understanding a problem, **designing a solution and making it work**. It's not just about building faster, but about using technology to explore better alternatives and create useful products with intent.

Work experience

Freelance Designer (UX + AI)
July 2026 – present

- I explore **AI as a tool for design and product creation**, bringing it into research, structuring, prototyping, documentation and iteration to move from ideas and briefs to functional experiences faster.
- I developed an **AI-assisted design** approach, experimenting with Claude, design systems and documented processes to turn design decisions into reusable rules and components, and to explore new ways for design, content and technology to work together.

Volunteer Translator @ Oppia Foundation
June 2025 – July 2026

- Adapted educational content from English to Spanish.
- Reviewed and edited translations by new contributors.

Senior UX Writer @ Mercado Libre
October 2020 – April 2025

- Led the simplification of complex intellectual property processes for Mercado Libre sellers.
- Designed content experiences for verticals such as Fashion and Auto Parts.
- Collaborated with product managers, designers, researchers and engineers to **define solutions aligned with business goals and user needs**.
- Coordinated discovery and usability research to validate hypotheses and improve experiences.
- Supported the onboarding and development of new members of the UX Writing team.

UX Writer @ Scotiabank Colpatria
February 2019 – September 2020

- I was **the first UX Writer at Scotiabank Colombia's Digital Factory**, helping lay the foundations of the discipline within the digital design team.
- Collaborated with a team of 8 designers to define content for digital banking experiences (web and app), helping turn complex financial processes into clearer, easier-to-understand flows for users.
- Developed the foundations of a **style guide for digital products**, promoting consistency, quality and efficiency in interface content creation.
- Facilitated working and coaching sessions with designers to review digital experiences, align content criteria and strengthen internal capabilities in UX writing best practices.
- During the integration with Citibank, led the analysis of recurring call center inquiries to identify information needs and **define key content for the digital help center**.

Freelance UI Designer @ Zemoga (now Monks)
February 2018 – January 2019

- Took part in digital design projects for clients in Colombia and the United States, working within multidisciplinary teams and **adapting to different systems and product needs**.
- For Nutresa, adapted desktop experiences to mobile, translating existing solutions to a new interaction context without losing visual consistency.
- For Walmart, designed interfaces for different areas of its ecommerce site based on wireframes from the product team.
- Worked with the design system developed by Walmart to maintain visual consistency and apply its components and patterns to new experiences.

Earlier work experience available on LinkedIn.

Recent projects

🏠 Matcha

https://matcha-prototipo.vercel.app/prototipo

- Redesigned **Matcha's main flow**, making it easier to search for, compare and choose housing in a clear, structured way.
- Built a **functional prototype from product principles**, integrating UX, UI, content and a documented design system to ensure consistency across screens.
- Used **Claude and Claude Code to speed up the design and iteration cycle**, evaluating UX, copy and design decisions on a functional prototype and documenting the key criteria for its handoff to production.

🌳 VISTA

https://bitagreen-vista-prototype.vercel.app

- Designed and prototyped the **proof of concept for VISTA**, a geospatial web app for managing urban green spaces, adapted to different roles and scenarios.
- Created a **design system optimized for AI**, defining tokens, components and rules for consistent prototype generation with Claude.
- End-to-end development with Claude (from brief to functional prototype and documentation), validated with real interfaces and edge cases.

🚲 The Bike Memory Project

https://www.bicis.maosolano.com

- Created and developed **The Bike Memory Project**, a collaborative archive of bicycles drawn from memory that combines public participation, personal narrative and digital curation in a web experience.
- Designed the **experience end to end**, from the public wall and individual entry pages to the drawing tool, the submission and consent flows, and a private curation area for managing the collection.
- Turned a **physical collection into a scalable digital system**, processing and publishing 387 drawings and defining content structures, information states, curation criteria and participation flows that allow the archive to keep growing.
